

Security to be free

Gemalto is a world leader in end to end digital security solutions designed to secure and simplify our day to day personal digital interactions.

Our activities range from the development of software applications through the design and production of secure personal devices such as smart cards, SIM/USIMs, ePassports and tokens, to the deployment of managed services for our customers. More than 1 billion people worldwide use our products and services for telecommunications, financial services, eGovernment, identity and access management, online authentication, multimedia content, digital rights management, IT security, mass transit and many other applications.

Our expertise

Gemalto's expertise spans the entire process for creating secure personal devices and the solutions involving them. We buy microprocessors, develop operating systems and software, produce and personalize secure objects.

Confidence in the robustness of our end to end security solutions is achieved thanks to a team of security and cryptography experts participating in the development of security standards and ensuring our products are certified to those standards.

We continuously strive to innovate with new forms and architectures, and provide complete solutions for secure, convenient services, as in this new Catrene project.
